Building Africa's **Future**, Today.

Company  
Profile  
2026

BUILDING AFRICA'S FUTURE TODAY

## Introduction

Asterisk Construction is a limited liability company that was founded in 2025. Our main operations deal with design and constructing of infrastructure projects, residential and commercial buildings. We are based in Nairobi, Kenya but undertake works all around Africa.

We take great joy in providing quality and sustainable services to our clients. Our designs are optimized to ensure efficiency of the structure during operations while providing adequate spaces for the client's current and future needs.

We undertake construction activities with the aim of constructing quality, as designed structures, within the scheduled time and budget. Our construction activities are majorly performed by local labor so as to create employment in regions we are working at. We ensure safety in our construction sites through provision of PPEs to all workers and guests, offering training on health and safety, providing warning signs in and around the site, onsite health officers and an insurance cover against injuries obtained in the construction site for all our workers and visitors.

Also, we pride ourselves in fighting global warming and ensuring environmental sustainability. This is achieved through incorporating green building elements in our designs which reduces the overall amount of energy required to operate the structures. As part of our corporate social responsibilities, we have also partnered with various NGOs and CBOs who are vigilant on environmental sustainability matters.

## Activities

Our activities include;

- Architectural and interior designs.
- Structural designs.
- Electrical and mechanical design.
- Landscaping design.
- Construction and demolition services.
- Maintenance of buildings.
- Land survey
- Project management services.
- Construction waste management.
- Delivery of construction materials.
- Hiring out construction equipment.

## Vision

To be the trusted leader in shaping Africa's built environment through efficient, innovative and sustainable development that exists in balance with the natural environment and communities we serve.

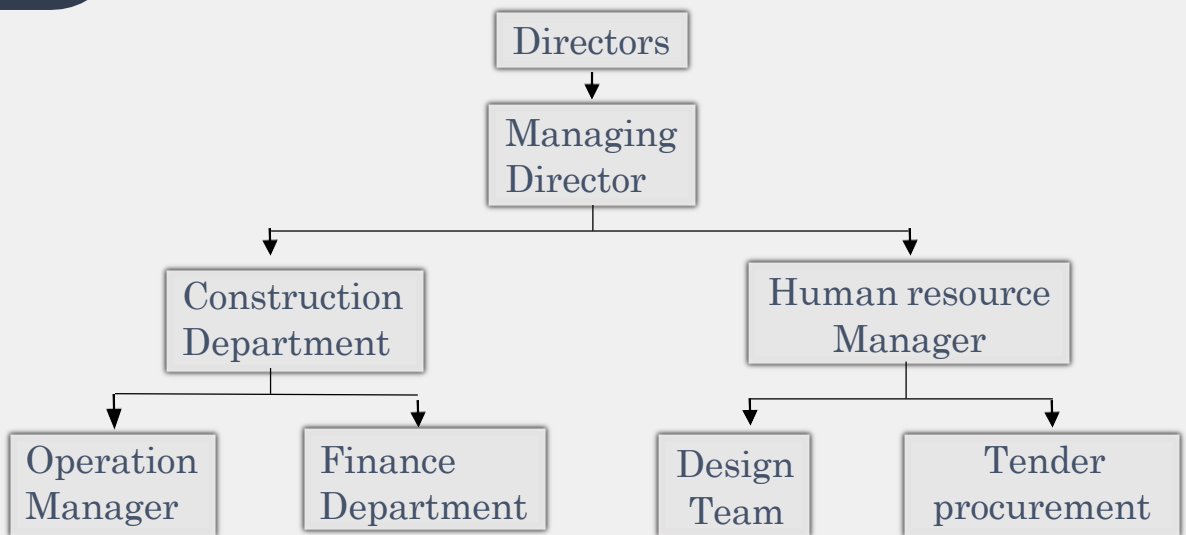

## Mission

To deliver high quality, reliable and value driven construction solutions that exceed client's expectations, while fostering professional growth, wellbeing and long-term career development of our people.

## Values

- Innovation
- Integrity
- Quality assurance
- Timely delivery
- Social responsibility
